

Biosphere Mix-up-Fix-up

As you know, Polly has her fun by giving you clues. Read the descriptions of the biospheres below. Then, write the name of the correct biosphere on the line.

① It has different areas, or zones. Forests are at the lowest zone. Farther up is a zone of small plants. Snow covers the top, which is very cold.

② It's hot all year round. Every afternoon there's a rainstorm. Lots of lush green trees and plants are the result. Many animals live here.

③ The nights are usually cold and clear. The days are burning hot. The sand blows into dunes.

④ Large water-filled hollows in the earth's crust. Home to many plants and animals.

⑤ Dry, grassy plain dotted with trees and shrubs. Home to many large animals, including elephants, zebras, and lions.

Here's Help!

Botley Says:

You've had a chance to visit each biosphere by now. On a separate piece of paper draw yourself in each biosphere above and put in a speech bubble to show what you would be saying.
