

NAME _____

Under the Same Roof page 1 of 2

How many people live in your house right now? Is it the same for everyone in our class? Let's do a survey and find out.

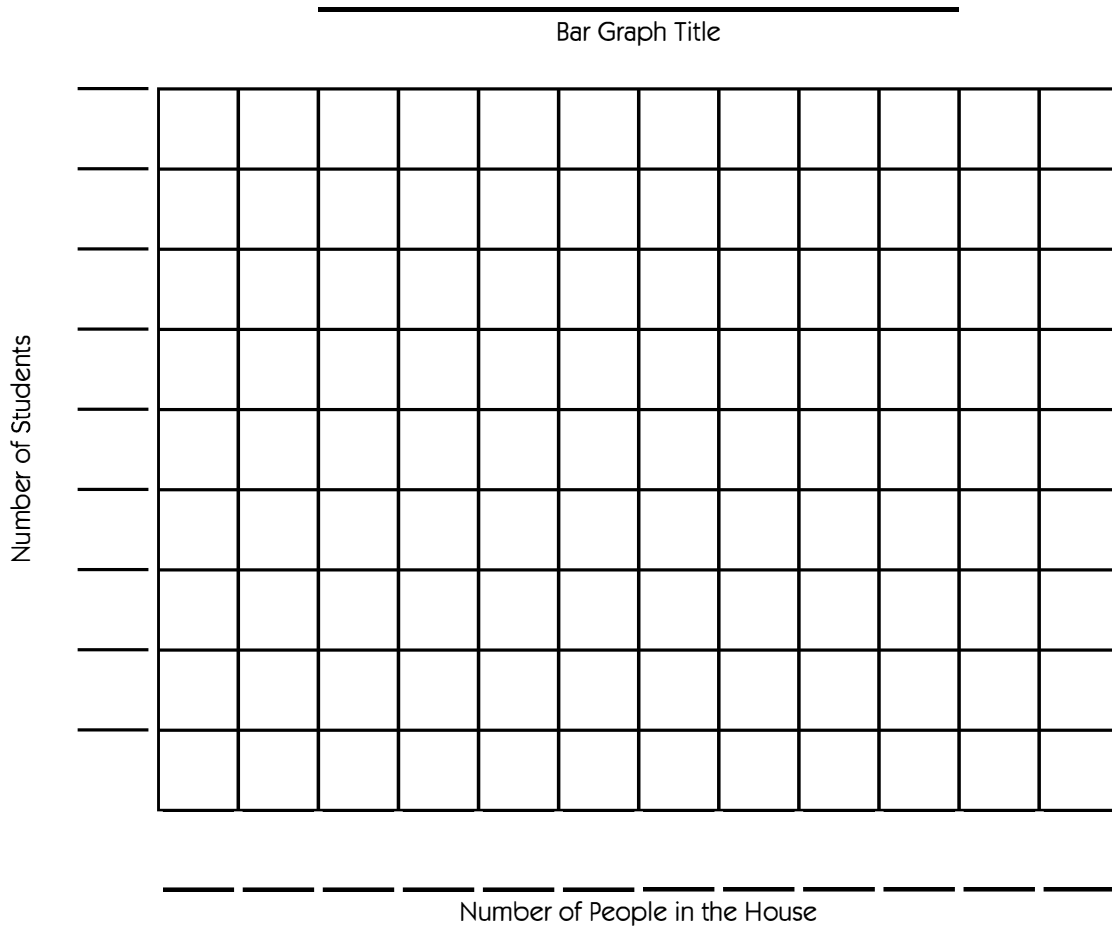

1 Record the data in a table.

Number of People in the House	Number of Students

2 Record the data on a dot plot.

Under the Same Roof page 2 of 2

3 Record the data on a bar graph.

4 Write at least 3 observations about the data we collected. What do the graphs tell you about the number of people living in our houses? What was the most interesting thing you learned from our survey?

5 Which format do you think works best to show this data - the table, the dot plot, or the bar graph? Why?
